LOGIWARE

IDS Premiere Partner

Precision Medical Care Requires Precision Management and Immediate Access

Integrated Digital Systems (IDS) has been your trusted neighbor for over a decade and will continue to be in the years to come. Through the years, we have contributed to the success of medical professionals through value added, client focused solutions. Whether you are a small practice with a staff

of less than 15 or a regional health care system of over 1000, LW/IDS will provide scalable, web accessible, document management solutions that can be tailored to your high standards and exacting needs.

Medical EDMS

In the unforgiving, fast paced environment of medicine where malpractice litigation and government oversight seem to continually reach new heights – collaboration and accountability are a must. To keep you at the pinnacle of patient services and satisfaction, LW/IDS can outfit your team with Med Docs™ electronic document

management system (EDMS). Med Docs™ allows for timely and secure on-line access to both paper-based and electronically created health information. Med Docs™ provides HIPAA compliant features for document capture, management,

indexing, retrieval, viewing, and distribution.

The ability to access documents in other departments such as Lab or Radiology is key to having a complete medical record. That is why Med Docs™ provides this collection capability to extend to all departments enterprise-wide.

Document Conversion, Management and Access

Patient records are far too important to be misfiled, mislabeled or lost. From aged, tissue thin receipts to the most detailed x-ray images, LW/IDS can provide on or off-site secure document conversion into any format. Bar coding technology ensures that every one of your documents is instantly and

accurately filed. If you opt to have your documents converted off-site you can trust they will be safe in our secured, DoD and HIPAA compliant controlled access facility. With LW/IDS web based solutions, you are able to instantly and securely access any document; any time; anywhere from any internet connection.
