About

Edge2007™ the 6th generation of a proven integrated document management application is a non-proprietary and open architecture product. Edge2007™ has state of the art features that address:

- Input
- Capture
- Store & Manage
- Share & Collaborate
- Security
- Easy Business Process Integration
- User Define GUI
- Open Architecture
- Microsoft Products Integration

Edge2007™ has been integrated and/or tested to be compatible with:

- Microsoft Office 2003 & 2007
- Microsoft SharePoint 2003 and MOSS 2007
- Microsoft SQL 2005
- Windows XP and Vista

Edge2007™ out of the box provides built-in interfaces to popular workflow and web based collaboration products such as Microsoft's Sharepoint, EdgeVault™ and Xerox DocuShare™ and includes its own web client Edge WebLink™. Edge2007™ the best product for today's electronic records, business information /document management provides a solution that is scalable from a single standalone client to an enterprise wide information management system. With the Edge WebLink™ thin client feature Edge2007™ information and documents can be shared throughout a company based on user ID and password or active directory services without duplicating the information or documents. Abandoning the traditional WYSIWYG concept of design Edge2007™ provides users the ability to individually customize each client with file specific metadata fields, data types and labels to meet their needs. Edge2007™ provides unlimited Data Sources (file cabinets) to be set-up in separate filing schema's to accommodate today's diverse office environments. With Edge2007™ you can literally manage an entire enterprise documents with individual custom schema's for each department with one product to install and manage.

Edge2007™ comes complete with an Access 2003 database, ready to run out of the box and with a simple click of your mouse your Access 2003 data can be moved to Microsoft SQL latest version. Standard reports and statistics can be produced using the Access2003 Query and reporting capabilities or with MSSQL the use of Crystal Reports. Edge2007™ is a Microsoft tested application that manages the batch capture, scanning, classification, storage, archive and retrieval of paper and over 200 electronic document mime types including email and attachments. Edge2007™ provides built-in interfaces to popular workflow and web based collaboration products such as Edge Workflow™, Microsoft's Sharepoint, Xerox DocuShare™ and EdgeVault™.

It is critical for customers to meet the business information management requirements of the many new regulations like HIPAA, Privacy Act of 1974, FOIA, Sarbanes Oxley Act and Consumer

Privacy Protection Act of 2002 to properly manage corporate communications and documents. Edge2007™ security features provide compliance with all of the standards and requirements of these laws.

Service Business

Microsoft integrated and tested products

Microsoft Windows 2003 Server
Microsoft Sharepoint Services
Microsoft Office 2003
Microsoft Office 2007
Microsoft Project
Microsoft Vista
Microsoft SQL Server 2005 and prior
Microsoft XP Professional and Standard

Edge2007™ runs on Windows2000 Server/Professional, Windows 2003 Server, Microsoft Vista and Windows XP Home/Professional platforms and future releases. Unlike most integrated document management product vendors, IDSS offers customized versions of Edge2007™ to meet customers' specific application and needs.

Edge2007™ ships with a Microsoft Access Database to keep it affordable and easy to manage, but also integrates with Microsoft SQL Server or any ODBC compliant database product. Also provided is compatibility with third party applications such as Seagate Crystal Reports for end-user developed reports, and the ability to use the Microsoft Access Upsize Wizard to migrate information to SQL-based client-server products.

Edge2007™ WebLink

Edge Web Link™, a .net application, that provides Edge2007™users secure local and remote access to their records without the need for a client application. The product resides on an IIS server and your database and the Image Directory can reside on the same server or a separate server. Edge Web Link™ allows users to Add, Delete, Edit, View, and View Properties of the folders that they have permission to access. Documents can be Added, Deleted, and Emailed through the Edge Web Link™ client based permissions. Folders and documents are protected by permissions. The owner of a folder or document can give individual or group permissions that allow only those specified users to view or edit the document.

Edge Web Link™ will provide secure access to your records from anywhere by anyone with permissions based on a valid username and password stored within the Edge Web Link™ Server or Active Directory.

Administrators will only have to update information once for each different client application configuration of Edge2007™. Access is protected using an ID and Password in Edge Secure Admin, or Active Directory. Edge Web Link provides for SSL and HTTPS encrypted access. RSA or USB Token security is available for dual authentication.

Edge Web Link™ is included with our Edge2007™ Client/Server application. Since the thick and thin clients share the same database and image directory, all files and folders created or updated in one will be available in the other. Edge Web Link™ logs all access and changes by user access ID and password.

Pricing starts with the Base System and Five Concurrent Web Clients.
